

HIMAJAL Unveils Three Innovative Water Solutions to Advance Water Conservation

Description

Dr. Anand Kumar Jain Introduces Advanced Technologies for Water Recovery, Scale Control and Smart Softener Management

Hyderabad: HIMAJAL Water Solutions, a brand of Divyank Industries Pvt. Ltd., has unveiled three innovative water treatment solutions designed to improve water recovery, address hard water-related scaling and simplify water softener management. The products were introduced by Dr. Anand Kumar Jain, Founder and Chairman of Divyank Industries Pvt. Ltd., popularly known as “The Water Doctor.”

The launch reflects the company’s focus on addressing growing water management challenges through advanced technologies that promote efficient water utilization, reduce avoidable wastage and support convenient system maintenance.

HIMAJAL DELTA: Enhancing Water Recovery

HIMAJAL DELTA is a double-recovery alkaline water purifier developed to reduce reject water generation in domestic reverse osmosis (RO) purification systems. Powered by SRWR® (Smart Reject Water Recovery) technology, the system is designed to achieve up to 60% water recovery under suitable feed-water and operating conditions. The innovation aims to help households make more efficient use of water while benefiting from alkaline water purification.

HIMAJAL SCALEOUT: Addressing Hard Water Scaling

HIMAJAL SCALEOUT is a water conditioning solution designed to address scale formation associated with hard water in suitable residential and commercial applications. Unlike conventional salt-based softeners, it does not require salt-based regeneration, helping avoid the water consumption associated with that process. Its effectiveness depends on the source water chemistry and operating conditions.

HIMAJAL SMART SOFTENER: Smarter System Management

HIMAJAL SMART SOFTENER is designed to simplify the operation and maintenance of water softening systems. Depending on the model configuration, features may include system monitoring, regeneration scheduling, low-salt alerts and system-status updates. These capabilities can help users monitor performance and plan maintenance more efficiently.

Speaking at the launch, Dr. Anand Kumar Jain emphasized that effective water management extends beyond purification to include water recovery, responsible resource utilization and reduced maintenance requirements.

“Water quality varies from one location to another, making it essential to test the source water and select the right technology for each application. Our objective is to develop practical, technology-driven solutions that help users manage water more efficiently and minimize avoidable wastage,” he said.

Guided by its vision of “One Stop Solution for All Water Problems,” HIMAJAL offers water purification systems, water conditioning solutions, water softeners and related technologies for homes, apartments, commercial establishments and industrial applications.

With the introduction of DELTA, SCALEOUT and SMART SOFTENER, the company aims to strengthen its portfolio of modern water treatment solutions while advancing its commitment to water conservation, technological innovation and efficient water management.
